

Investing in Puget Sound's Health and the Region's Future

October 2021

Project Background

Seattle Public Utilities and King County Wastewater Treatment Division are building an underground storage tunnel to significantly reduce the amount of polluted stormwater and sewage that flows into the Lake Washington Ship Canal, Salmon Bay, and Lake Union from our sewer system during storms.

The tunnel is 2.7-miles long, running from Ballard to Wallingford, and approximately 18-ft, 10-in wide. It will temporarily hold more than 29 million gallons of sewage and stormwater during heavy rain. When the storm passes, the stored sewage and stormwater will be sent to King County's West Point Wastewater Treatment Plant.

Queen Anne Site Elements

In summer 2020, Seattle Public Utilities and King County began work near West Ewing Mini Park for the Ship Canal Water Quality Project.

Work includes:

- Building a new 8-ft diameter tunnel under the Ship Canal to convey polluted stormwater and sewage to the new storage tunnel
- Building a drop shaft to direct flows into the new 8-ft diameter tunnel
- Installing new pipes and structures to convey polluted stormwater and sewage to the drop shaft
- Providing odor control piping to minimize odor

What to Expect During Construction

- Construction-related noise, traffic, dust, and vibrations
- Parking restrictions and roadway detours
- Vehicle, pedestrian, and bicycle wayfinding and detour signage
- Ship Canal Trail detour through summer 2022
- Protection or removal of some trees
- Closure of West Ewing Mini Park and adjacent parking lot through mid-2023

Queen Anne Schedule

The following photos are examples from other construction sites

Site Preparation

In summer 2020, crews mobilized to the work area and put fences up for the safety of crews and people nearby.

Excavation & Construction

Crews dug beneath the surface to prepare and build underground structures that we will use to access the 8-ft conveyance tunnel for operations and maintenance.

Diversion Structure Construction

Crews have begun excavating and building an underground diversion structure which will divert untreated sewage and stormwater to the storage tunnel during heavy rains.

8-ft Tunneling Machine Arrives

The new 8-ft tunnel will send flows to the storage tunnel via Fremont. The tunnel boring machine used to build the tunnel started in Fremont, will travel under the Ship Canal, and be removed at the Queen Anne site.

Site Restoration

Once construction is complete all impacted areas will be restored to previous conditions. This will include the replanting of trees and repaving streets.
